

HOUSING NOW

Regina CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Second Quarter 2014

Highlights

- Total housing starts trended lower in the first quarter
- Resale price gains led by a composition shift towards higher priced properties
- Net migration in 2013 moderated, but was second highest on record

Figure 1

* SAAR: Seasonally Adjusted Annual Rate

¹ Seasonally adjusted annual rates (SAAR) — Monthly housing starts figures are adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace was maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New Home Market

Housing starts in the Regina Census Metropolitan Area (CMA) were trending at 2,348 units in March compared to 2,618 in February and 3,198 in January. The trend is a six month moving average of the monthly seasonally adjusted annual rates (SAAR) of total housing starts.

Actual housing starts in the Regina CMA totalled 371 units in the first quarter of 2014, down 38 per cent from 595 units in the corresponding period of 2013. While fewer starts were reported in both the single-detached and multi-family sectors, the reduction was most pronounced with the latter where starts declined 43 per cent from a year earlier. Each month of the first quarter of 2014 recorded significantly fewer starts than the corresponding month of the previous year. Despite continued employment growth, population gains, and historically low mortgage rates supporting new home demand, rising inventory and prolonged frigid temperatures during the first three months of 2014 prompted builders to scale back production of new homes.

There were 165 single-detached homes initiated in Regina during the first three months of 2014, down 29 per cent from the 234 started in the same period one year prior. All three months in the quarter recorded year-over-year declines, with the largest reduction reported in February. Nearly all areas across the Regina CMA recorded weaker single-detached starts compared to the previous year. Nonetheless, the Central zone contributed the largest share in single-detached construction in the quarter, with starts representing 45 per cent of the total CMA production.

Figure 2

Source: CMHC

A total of 1,169 single-detached units were under construction at the end of the first quarter of 2014. Although the volume was lower than in the final quarter of 2013, it was still six per cent higher than the 1,102 single-detached units under construction at the end of March 2013. Meanwhile, local builders put finishing touches to 188 single-detached homes in the first quarter of 2014, down 7.8 per cent from the 204 completed in the corresponding period one year prior. By comparison, a total of 191 single-detached units were absorbed in the same period, close to the 184 units during the first three months of 2013. At the end of March 2014, the inventory of complete and unabsorbed single-detached homes stood at 98 units, up 21 per cent from the same month in the previous year.

At an average of \$483,980, the price of a single-detached home absorbed in Regina was 4.7 per cent higher in the first quarter than a year earlier. Part of the increase can be attributed to composition, as the share of homes selling above \$500,000 rose to 36

per cent in the first quarter from 28 per cent in the same period one year prior. By comparison, contractor selling prices measured by Statistics Canada's New House Price Index (NHPI) for Regina rose an average 2.9 per cent to the end of February 2014, compared to the same period in the previous year.

Multi-family starts, which include semi-detached units, rows, and apartments, totalled 206 units in the first quarter of 2014, 43 per cent fewer than the 306 units initiated in the same period one year earlier. After a record performance in 2013, rising inventory has prompted builders to scale back production of multi-family units so far this year. The reduction has been mostly pronounced among apartment starts, which declined 59 per cent to 114 units in the first quarter, down from 276 in the corresponding period one year prior. Similarly, row starts declined 31 per cent to 34 units under the same comparison. In contrast, builders initiated 58 semi-detached homes in the first quarter, 61 per cent more than in the same period of 2013.

Figure 3

Source: CMHC

There were 117 multi-family units completed for rental tenure in the first quarter, up from 18 in the same period one year earlier. In the ownership market, builders completed 175 multi-family homes, compared to 107 in the first quarter of 2013. By comparison, 137 multi-family units were absorbed in the ownership market during the first three months of 2014, up from 97 in the same period one year prior. With completions surpassing absorptions, the inventory of complete and unabsorbed multi-family units in the ownership market rose to 94 units at the end of March, more than double the 45 units absorbed at the end of March 2013. The number of multi-family units under construction for both ownership and rental tenure stood at 2,217 in March, 19 per cent more than 1,863 in the same month the previous year. This increases the risk of additional inventory gains moving forward.

Existing Home Market

Residential MLS® sales in Regina totalled 667 units in the first quarter of 2014, down 2.8 per cent from the 686 transactions in the corresponding period of 2013. The moderation in sales can be attributed to slower net migration in the previous year, moderating job growth, and prolonged frigid temperatures. Similarly, sales

on a seasonally-adjusted basis shifted lower in the first quarter of 2014 from the fourth quarter of 2013.

Active listings in Regina averaged 1,540 units in the first quarter, up 27 per cent from the same quarter one year prior. Given higher listings and lower demand, the sales-to-active listings ratio declined to average 14 per cent in the first quarter from 19 per cent in the first three months of 2013. As a result, average days on market rose to 47 in the first quarter of 2014 from an average of 38 days in the same period a year earlier.

Despite rising supply and slightly weaker demand, Regina's MLS® residential prices edged higher in the first quarter of 2014 to an average of \$321,238, up from \$309,273 in the corresponding period of 2013. The gain can largely be attributed to an increase in the share of homes selling in the higher price ranges. On a seasonally-adjusted basis, the average resale price in Regina actually declined in the first quarter of 2014 from the fourth quarter of 2013.

Economy at a Glance

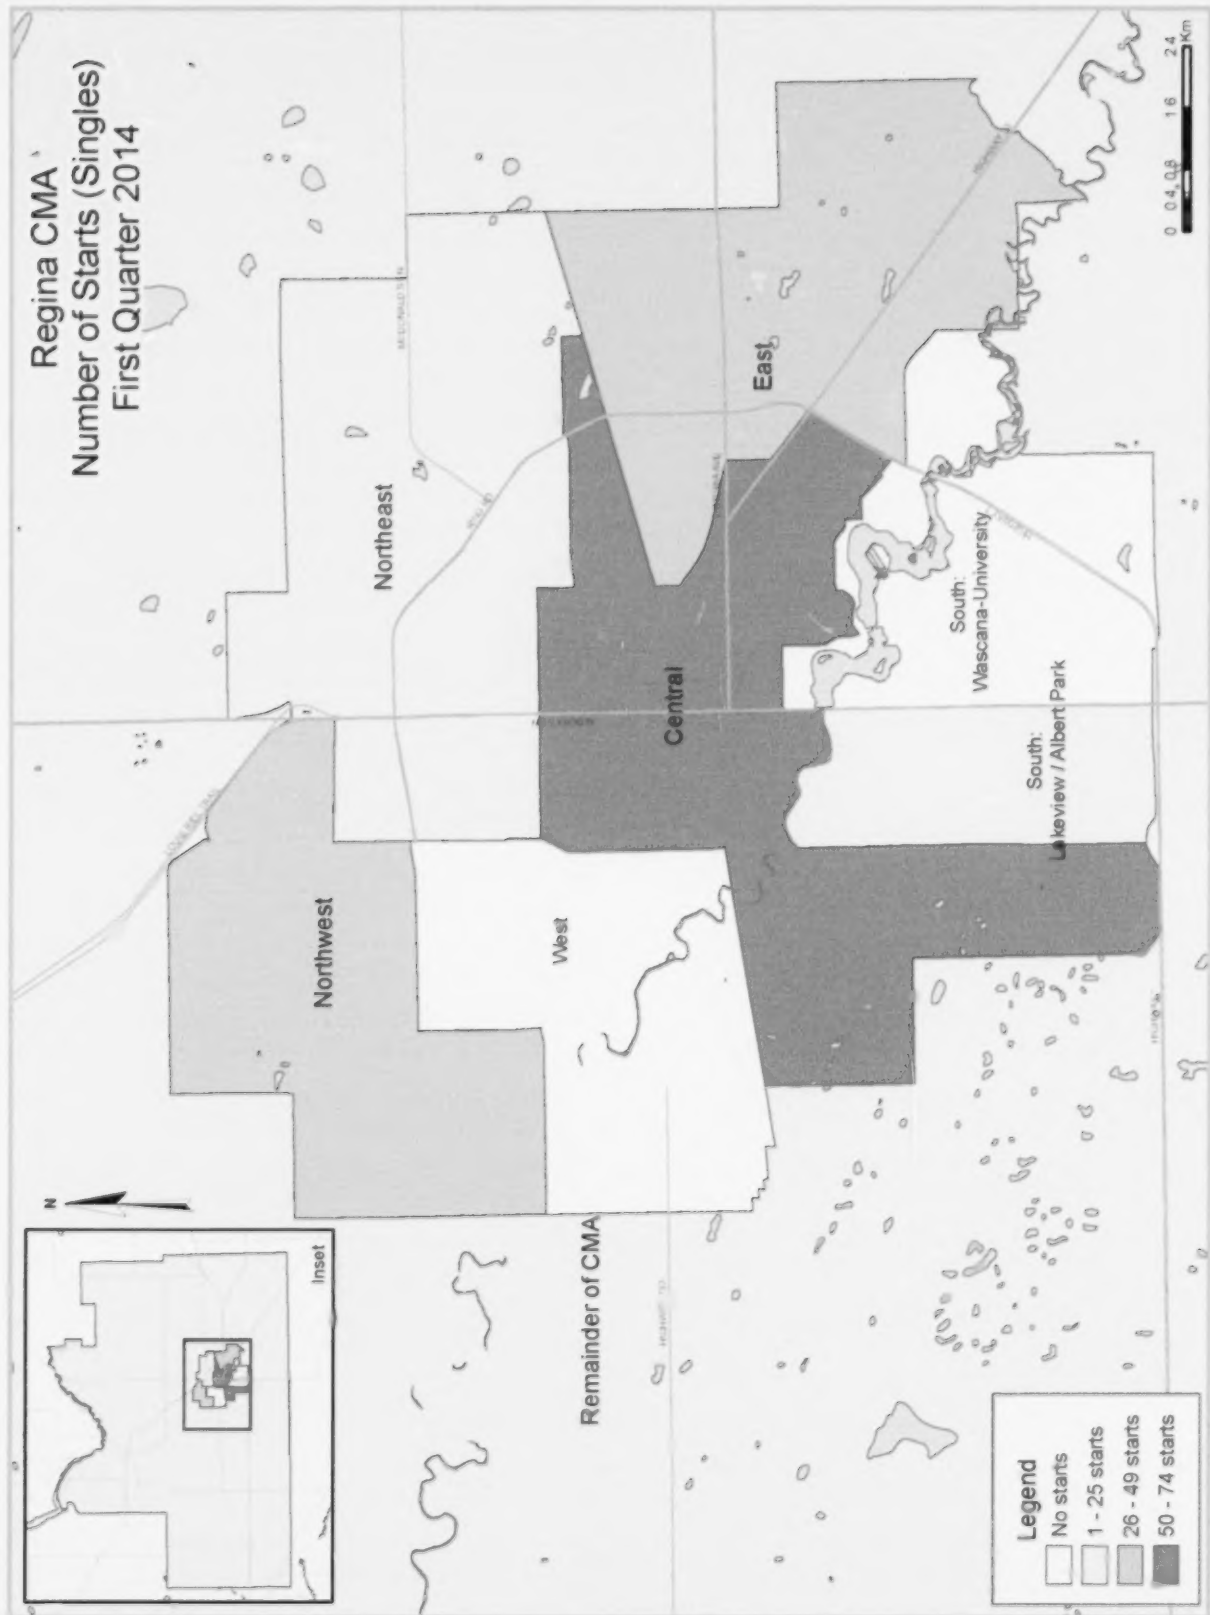

After a 5.9 per cent gain in 2013, the pace of employment growth in Regina moderated during the first three months of 2014. The average number of people working in Regina rose 1.6 per cent to 132,300 in the first quarter from 130,200 in the same period of 2013. This represented the creation of 2,100 new jobs, of which more than 70 per cent were part-time positions. Despite the modest gains in employment during the first quarter, Regina's seasonally-adjusted unemployment rate declined to 3.7 per cent from 4.3 per cent in the fourth quarter of 2013. Meanwhile, average weekly earnings in Regina rose 1.9 per cent to \$950 in the first quarter from \$932 in the corresponding period one year prior.

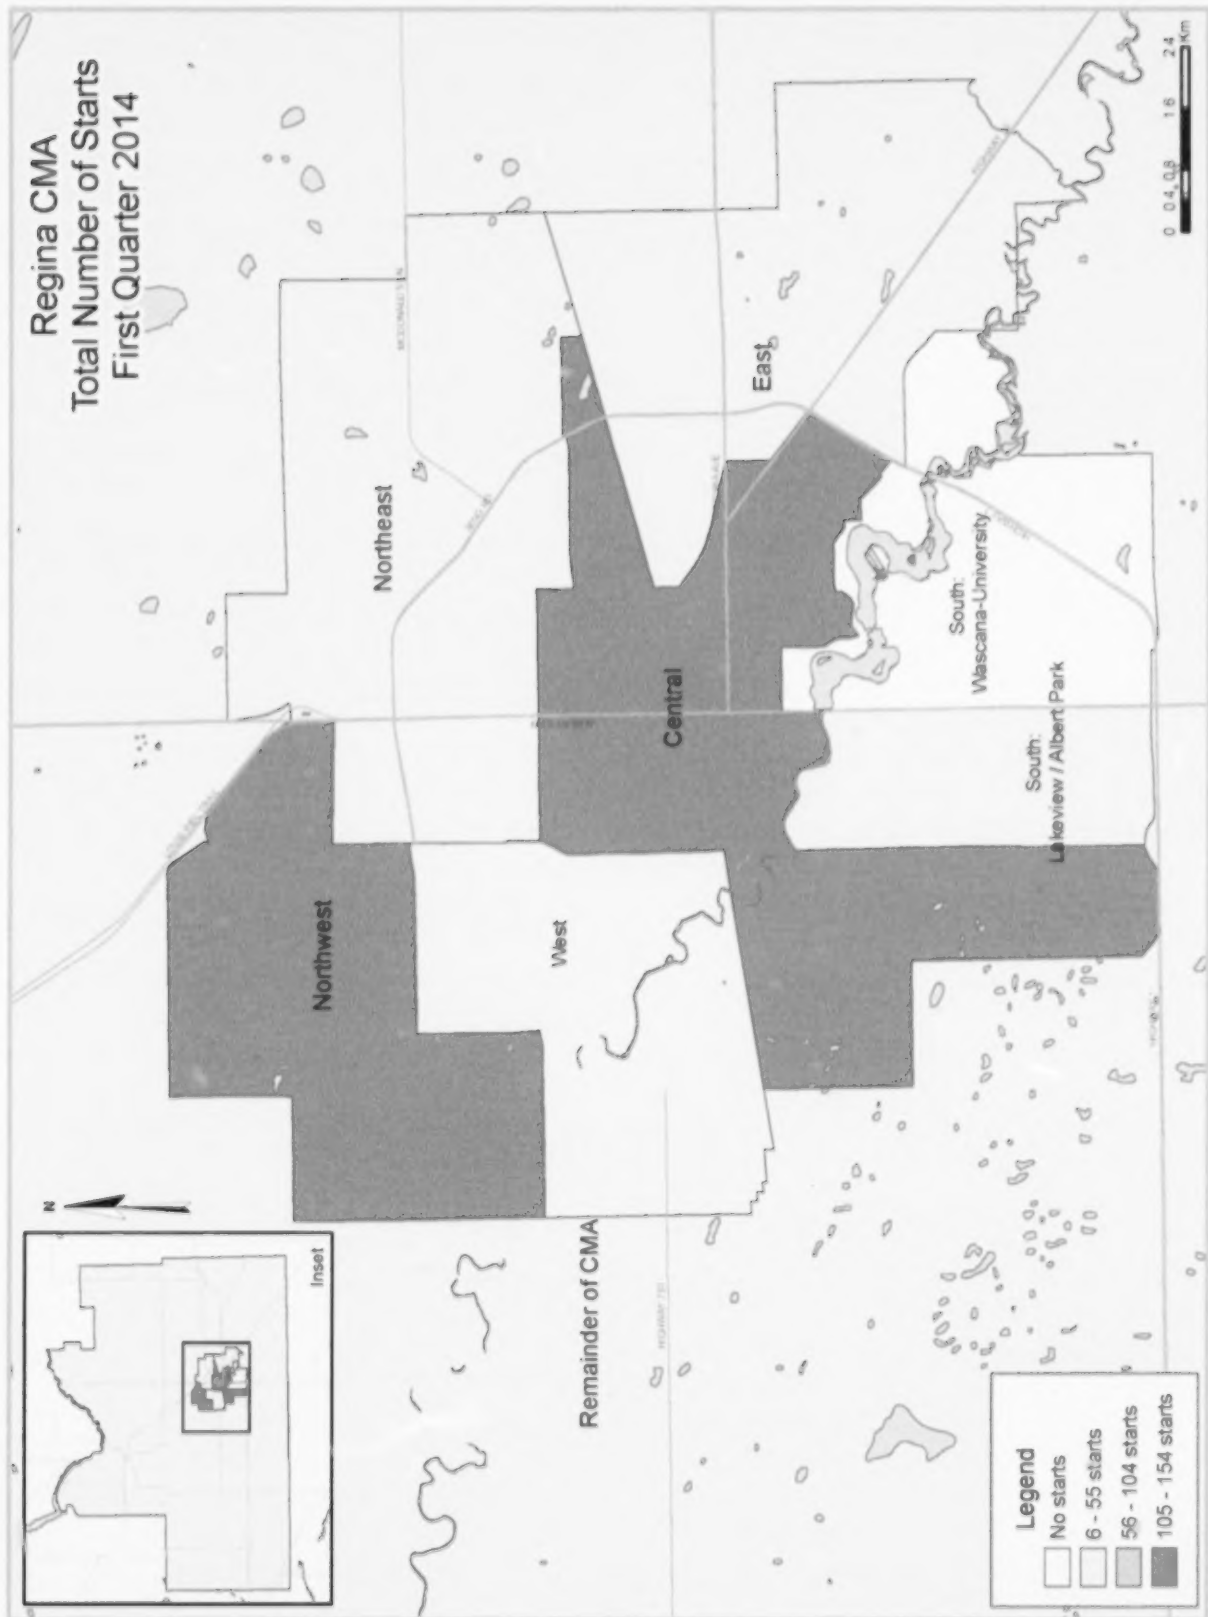

Despite the strong pace of job growth in 2013, total net migration to Saskatchewan moderated in the year as improving economic prospects outside of the province, particularly in Alberta, impacted the number of new arrivals. Through December, Saskatchewan attracted a total of 14,476 net migrants, down 9.4 per cent from 15,974 in 2012. Net interprovincial migration recorded the largest reduction of 37 per cent to 1,368 people during 2013, compared to 2,183 in the previous year. A net total of 10,466 international migrants arrived in the Saskatchewan in 2013, down 4.6 per cent from one year prior. Similarly, the number of non-permanent residents entering the province in 2013 declined 6.3 per cent to 2,642, from 2,820 people in 2012. Despite the reduction, net migration to Saskatchewan in 2013 was the second highest level on record and remains an important driver of population growth and new household formation in the province.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **"Single-Detached"** dwelling (also referred to as **"Single"**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **"Semi-Detached (Double)"** dwelling (also referred to as **"Semi"**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **"Row (Townhouse)"** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **"Apartment and other"** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **"intended market"** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **"Rural"** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
